

MetaTrader 4

Android User Guide

1 Install the app and log in

Simply download MetaTrader 4 Android app or search "MetaTrader 4" on the Google Play and download the app.

From the main login screen, select "Login with existing account." Please note that you should never select "Open demo account" from MetaTrader 4 for Android. If you sign up for a demo account directly from the mobile platform, you will not receive PaxForex's pricing, leverage, or available currency pairs. It will not be a PaxForex demo account, but rather a generic MetaTrader 4 demo.

2 Select your server

Search for "PaxForex" from the Servers screen. Select "PaxForex Server" to log into your trading account.

If you are unsure of which server you need to select, please contact our Customer Services team either by :

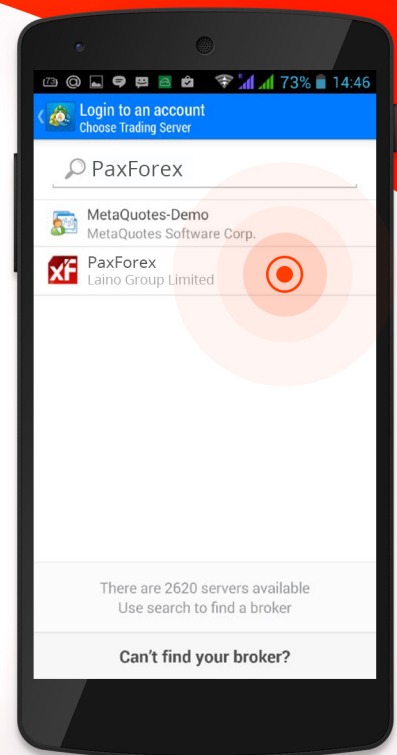

email
support@paxforex.com

telephone
+44 208 133 0626

... or PaxForex live chat.

Enter server login details

This will direct you to the "Login" page as shown below. Enter your MT4 account login number, your master password and press "Login":

You will then be prompted to enter your MT4 login information on the next screen. You can log into MetaTrader 4 for Android with the same login information provided for your existing MetaTrader 4 demo/live accounts.

You're ready to trade!

Upon successful login, you will see the "Quotes" screen. From here you can buy, sell or place pending orders:
